SAP Re-Certifies windream Software ArcLink 5.0

Official certificate once more confirms full compatibility to SAP Content Server and to SAP ArchiveLink interface

SAP certified the current version 5.0 of our SAP integration solution windream ArcLink. ArcLink 5.0 connects the windream ECM system with specific SAP applications for electronic archiving and document management. The corresponding certificate was awarded to us by SAP AG on December 21, 2011.

Certified since 1994

The windream products have been certified for SAP applications since 1994. The certificate recently issued by SAP AG now also covers the current version 5.0 of the windream SAP interface windream ArcLink. This means that SAP continues to acknowledge us as an "Independent Software Vendor with Certified Integration".

Extensive ECM portfolio for SAP

The certification once more confirms our high competence for the integration of ECM solutions into the specific modules of the SAP world.

For several years now, we have been offering an extensive portfolio in this section, which, among other things, also includes the products "windream ArcLink" and "windream ScanLink", which is now offered under the product name "windream SAPcommand".

Based on a license model containing a licensing based on server or client only, our products are extraordinarily well-priced for SAP users and convince with their highly convenient use, a key trait of all windream products.

Extended windream ECM solution for SAP applications

windream SAPcommand Connects SAP World with windream Enterprise Content Management

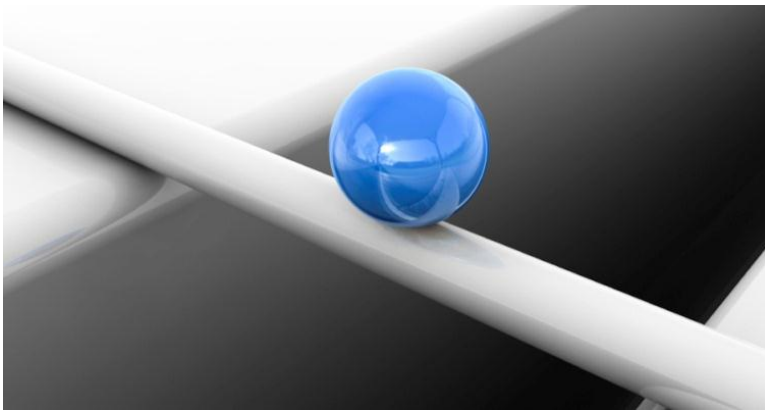

Under the name "windream SAPcommand", windream GmbH now offers an extended solution for SAP applications, which distinguishes itself from previous versions of our SAP integration by its extended range of functions. The new software allows users to connect SAP applications such as SAP ERP with the windream ECM system. With its generic interface to the SAP world, this solution offers a wide variety of possibilities for the further processing of incoming documents, which used to be connected with considerable efforts up till now.

windream SAPcommand in detail

windream SAPcommand offers exactly what users have always wanted: a fusion of different software worlds to one completely integrated system. With windream SAP command, SAP users profit from the advantages of the windream ECM system – without having to say goodbye to their familiar IT environment.

windream SAPcommand does not only allow users to – as already familiar – link all SAP-specific processes with any desired documents saved in the ECM system. The process also works vice versa.

Links between documents and SAP application are made possible via components provided by SAP. In this context, the architecture of the windream ECM system allows the use of these SAP components according to the specific requirements of each customer. This results in a direct link between SAP-specific editing processes and efficient Enterprise Content Management, since windream SAPcommand seamlessly links documents saved in the windream ECM system to SAP applications.

In this context, scanned and electronically created incoming documents – e.g. Office documents or e-mails – as well as information already filed in windream can be archived compliantly and linked to SAP application documents. The required indexing processes are carried out automatically and in the

background, making additional manual operations unnecessary for the user. The indices can be used for identifying and retrieving documents both in windream and in the SAP application.

Further information

For detailed information on windream SAPcommand, please feel free to contact windream GmbH under phone number **+49 234 9734-0** or via e-mail to sales@windream.com.

CeBIT 2012 • March 6 - 10 • hall 3, stand J 20

“Your Documents – Your Capital”

windream presents technologically leading ECM solutions for the compliant management of your company’s entire knowledge

At this year’s CeBIT, under the motto “Your Documents – Your Capital“, we will demonstrate how companies can manage and compliantly archive their entire knowledge in windream, and why an investment into the future-proof and top-modern windream ECM system is a good investment.

From March 6 to 10, 2012, everything will be about the most important aspects of digital data management in the context of compliant Enterprise Content Management

at the windream partner stand in hall 3, stand J 20.

CeBIT guiding theme: “Managing Trust”

With our motto, we stick closely to the guiding theme of this year’s CeBIT: “Managing Trust“. With this theme, the trust of companies into modern ICT solutions shall be strengthened – and the aspect of permanent data security is of central importance for this. After all, security creates trust – and ECM users can only completely and utterly trust in the system of their choice if the security of the system is guaranteed at all times.

“Managing Documents” – with windream

In accordance with the CeBIT guiding theme, all our presentations at the windream stand will be about compliant document management, true to the motto “Your Documents – Your Capital“. We will present trade fair visitors with technologically leading ECM solutions for managing the knowledge of entire companies. This, among other things, covers the compliant archiving of all

documents, including the archiving of e-mails and a search application guaranteeing the retrieval of every desired document. Furthermore, an ECM system protects documents from unauthorized access and from manipulations.

New products

As in previous years, our trade fair program will be complemented by new products. Among other things, this includes solutions for SAP integrations and new versions of the windream Exchange e-mail archiving solution, of the windream Web Portal, the business process management solution windream BPM and the windream integration into the bizhub multi-function systems of our partner Konica Minolta, named windream bizhub connect. The trade fair program is complemented by the presentation of hardware and software solutions of our co-exhibiting partners.

Tickets and appointments

If you want to secure your personal appointment for a discussion at the windream stand before the start of the CeBIT, please feel free to contact us: sales@windream.com. We are looking forward to your visit!

TEAC Europe GmbH Archives Electronic Forms with windream

Internationally active audio and IT company as new windream customer

TEAC Europe GmbH, one of the largest subcompanies of the Japanese TEAC Corporation, is a new windream customer. In the future, the company will use the windream ECM system for the management and archiving of electronically created forms. With TEAC Europe GmbH, another internationally active company and one of the world's leading producers of hi-fi, high-end and professional audio systems, IT products and digital media joins our clientele.

Efficient output management and digital archiving of forms

TEAC Europe GmbH, based in Wiesbaden, will primarily use the windream ECM system for the management and digital archiving of electronic forms, e.g. invoices. The forms, previously created in an output management system, will be converted into the universal PDF or PDF/A format and transferred directly to the compliant windream archive. The PDF conversion and the subsequent storage of the documents in windream are carried out automatically. The entire process does not require any manual interference from users. For a quick retrieval of documents archived in windream, all receipts are assigned a barcode (DataMatrix 2D barcode). These barcodes contain the specific index properties of documents. The windream ECM system can then use the information saved in the barcodes as indices for a quick identification of the archived documents.

The installation and configuration of the windream ECM system at TEAC Europe in Wiesbaden was conducted by the windream partner "Connect Solution" from Spay am Rhein.

windream Distributor Kinetic Cooperates with Graphax

Strategic partnership with exclusive producer of Konica Minolta devices extends Swiss market segments

As of now, our ECM solution "windream bizhub connect", a software for linking the windream ECM system to the multi-function systems of our partner Konica Minolta, will also be available in Switzerland. This strategic decision is based on a partnership contract recently concluded between our Swiss distributor Kinetic AG and Graphax AG, also based in Switzerland.

Exclusive Konica Minolta distributor

Graphax AG is the exclusive distributor for the copying and printing solutions of the windream partner Konica Minolta in the section of "Business Solutions" in Switzerland.

Thanks to the cooperation between Kinetic and Graphax, windream GmbH is going to enter new interesting market segments in Switzerland, especially since the bizhub connect solution is an innovative and efficient software solution and seamlessly connects the windream ECM system with the Konica Minolta multi-function devices.

Graphax and Kinetic view the new partnership as very advantageous for the further extension of market segments in Switzerland. Daniel Lütold, executive director of Kinetic AG: "As the exclusive Konica Minolta representative in Switzerland, Graphax is of course the ideal partner for us, and therefore also for windream GmbH, the producer of the bizhub connect software. Since the compliant archiving of business-relevant documents is becoming an increasingly important topic, our customers will not only profit from our partnership with Graphax, but especially from the windream products offered by Graphax and Kinetic in Switzerland."

Beat Oberholzer, head of the solutions department at Graphax AG, adds, "The hard- and software solutions offered by windream and Konica Minolta are leading in terms of performance and functions. Especially the windream solution bizhub connect will help us to open up new market segments in the sector of combined and highly integrated ECM solutions."

windream Trainings

Specific windream training sessions in English language will be held on request.

Please contact our Partner Manager Edwin Sembritzki for further information via e-mail e.sembritzki@windream.com or phone **+49 234 9734-541**.
