## Connect

The database alternative for the windream ECM-system and windream BPM

PostgreSQL is considered to be **the** alternative in terms of database management systems worldwide, especially since PostgreSQL is provided as open source software and may thus be operated free of charge. So, what is there against running the database of the windream ECM-system or even a database for windream BPM on PostgreSQL? - Nothing at all!

The new windream interface to PostgreSQL allows you to migrate your windream databases to PostgreSQL even if you have used a different database system so far. This is because our software solution migrates your complete, existing windream data stock to PostgreSQL - fast, uncomplicated and secure.

## Without serious functional limitations

Switching to PostgreSQL is not connected with serious functional restrictions. The functionalities of your previous database system or DB-Server regarding windream will remain the same under PostgreSQL as you have used them in the „old“ database system so far.

By the way, this also applies to the performance, because PostgreSQL is known for its enormous speed when accessing stored data - and this without additional license fees or costs for the system operation of your databases. This is because „open source“ means that PostgreSQL can be used freely. An invaluable advantage compared to other systems. Only the purchase of the windream PostgreSQL interface is required.

## PostgreSQL extension PGroonga extends functionality

The huge developer community around PostgreSQL is constantly trying to develop new functionalities as so-called „extensions“ in the form of plug-ins. One of these extensions is PGroonga. This is a plug-in that

integrates the so-called full-text extension into PostgreSQL. By installing this extension, you can then - as in other database systems - retrieve the information stored in windream on the basis of its extracted full text.

## Highlights at a glance

- ✓ Open Source Software
- ✓ After purchasing the windream interface: No additional license fees for using the database system
- ✓ Enormously fast
- ✓ New installations and migrations of existing windream databases
- ✓ Uncomplicated database migration from other DB systems

**Conclusion:**

PostgreSQL is unrivaled as a free alternative to other database management systems!

# Rely on the Technological Market Leader

If you plan to invest in an innovative, efficient and easy to handle ECM-system, or if you need further information on how to optimize your business processes concretely, we should get to know each other.

In the market sector of ECM-software suppliers, windream GmbH is the technologically leading manufacturer. With the windream ECM-system based on the patented Virtual File System technology (VFS), we have created an unrivaled tool for administering your complete company knowledge. Our software is easy to handle, effective, and future-proof. We have 20 years experience in successful software solutions development for enterprises of any size. Medium-sized companies and multinational corporations as well rely on our top quality products and on our technological know-how.
